

**CLINE MINING ANNOUNCES
STRIKE EDWARDS GOLD DRILLING RESULTS**

Sudbury, Ontario, July 25, 2007. Cline Mining Corporation (“Cline” or the “Company”) (TSX: CMK) is pleased to announce drill and assay results from its core drilling program on the Strike Edwards joint venture gold property which is situated to the west and adjacent to Cline’s wholly owned Cline Lake gold property near Wawa, Ontario. The drilling program was carried out by Heath and Sherwood Drilling Ltd of Kirkland Lake, Ontario and Superior Drilling of Dubreuville, Ontario under the direction of Dale M Hendrick P.Eng., a director of Cline and a Qualified Person for the purpose of National Instrument 43-101.

Pursuant to a joint venture agreement, previously announced in December 2006, Cline had the right to earn up to a 12.5% joint venture interest in the Strike Minerals Inc. (“Strike”) Edwards gold property (the “Strike Edwards gold property”) by expending up to \$350,000 on exploration on or before June 30, 2007. The Strike Edwards gold property is contiguous to and lies to the west of the Cline Lake gold property. Cline was the operator, and on completion of this diamond drill program has earned its 12.5% joint venture interest in the property. In addition, Cline owns 2 million shares of Strike.

Nine(9) drill holes were drilled on the 3 claim Strike Edwards gold property for a total of 11,341feet. Four of the holes, ST 06-4 and 05 drilled in 2006 and ST 07-01 and 02 drilled in 2007 tested beneath the 900 foot underground level of the previously mined Porphyry and Carbonate Zones.

From 1997 to 2001, River Gold Mines Ltd (“River Gold”) produced from the Porphyry and Carbonate Zones at the Strike Edwards Mine 140,138 ounces of gold and the ore was trucked 100 kms to the River Gold Magnacon Mill. (Reference Canadian Mines Handbook 1999 to 2003- River Gold Mines Ltd.). River Gold reported (Canadian Mines Handbook) that in 1997, the Edwards mine produced 63,000 tonnes and 30,414 oz gold and in 1998, the mine produced 34,200 tonnes and 12,851 Oz gold. The calculated average grade for the 2 years initial production of 97,200 tonnes is 0.445 oz/Tonne gold.

A table which shows a summary of significant intersections from the drill hole program follows:

DDH	Location (feet)	Azimuth (degrees)	Dip (degrees)	From (feet)	To (feet)	Length (feet)	Oz/ton Au
ST 06-4	3+00E, 5+00N	205	-68	No significant intersections			
ST 06-5	2+00E, 5+00N	205	-68	199.0	219.6	20.6	0.064
				301.0	311.5	10.5	0.175
				799.3	802.3	3.0	0.325
ST 07-1	4+00E, 5+00N	205	-68	No significant intersections			
ST 07-2	5+00E, 5+00N	205	-68	382.0	392.0	10.0	0.973
				Incl 382.0	386.0	4.0	2.410
				1,803.5	1,805.0	1.5	0.427
CL 07-14	500E, 320S	180	-55	774.0	778.0	4.0	0.381
				801.0	804.0	3.0	0.347

Head Office: Suite 4 - 2008 Lasalle Boulevard, Sudbury, Ontario P3A 2A5

Vancouver Office: Suite 2950 - 650 West Georgia Street, Vancouver B.C. V6B 4N8

The above results indicate the Porphyry and Carbonate zones are pinching out (1.5 feet of 0.427 opt.Au) but a new zone is appearing in the upper part of the holes that warrants additional drilling. Significant gold values in CL 07-14 indicate a new zone with more infill assay samples yet to come. More drilling is recommended.

The technical information contained in this News Release has been prepared and approved by Dale Hendrick P.Eng. a Qualified Person for the purposes of National Instrument 43-101.

Cline Mining Corporation is a mine development company focused on the exploration and development of uranium and iron-ore in Madagascar, gold in Canada and metallurgical coal in Canada for the international seaborne coal trade market. The Company website can be located at www.clinemining.com
